FreeFileSync is one of the tools with the best testimonials that we can find today, many are the users who have listed this software as an excellent option to compare and synchronize folders, besides being an open source software which is available to the entire community in general.

For this reason, today we wanted to give our humble opinion about this software and describe some of the most relevant contributions we have found in this program.

Before giving our opinion, it is necessary to define FreeFileSync, in order to give an opinion of the tool as objective as possible.

What is FreeFileSync?

My picture

FreeFileSync is a software used to make comparisons and synchronization of folders, which is responsible for creating and managing backup copies of all the user's important files. Basically FreeFileSync takes care of determining the differences between a source and destination folder and transfers only the minimum amount of data needed.

Like other similar programs it is also open source software and is available for Windows, macOS and Linux.

What do we think of FreeFileSync?

My picture

Although it is not the only tool on the market that can provide excellent performance, it is undoubtedly one of the best, this opinion is not only ours, but also in the opinion of hundreds of users who have used the software and can testify to the good performance that the tool presents, just enter its website <https://freefilesync.org/> and read the large number of reviews they have received from the entire community, which is why we prefer not to issue a too technical opinion, since the results speak for themselves, it is easy to know a tool that does not fulfill the purpose for which it was created, users who use this tool will be responsible for making known the shortcomings it presents.

In the case of FreeFileSync users have been responsible for publicizing the great advantages they have over other similar products, so this time there is not much to add, we can only say that we recognize the excellent reputation that has built FreeFileSync within the community, and that can only be achieved through understanding the needs for which the user decides to use a product or another.

Congratulations to FreeFileSync
