I use the media for one of them for the purpose of communication and know the latest news. If you? But it actually makes us even more trapped by convenience. The rapid development of technology, every day makes new tools created. Even we used to be we did not use the media, because the environment affected us. Finally, we use it. Although there is a positive, it cannot be separated from the negative too. Depending on how wisely use it.

Increasingly spreading new application news, causing other users to use it. Sometimes in a condition, we are forced to update with the latest news. Then what is currently being discussed by many people? Are you interested in using it?

Often called artificial intelligence. Many companies try to group in many ways and use. From a tracker to recognizing pictures, speech, can be our personal assistant, navigation, customer service that serves humans.

Even public services now use many AI as a choice that is always active. Just imagine if you use human power with 24 hours without stopping. Maybe it's superior, but there are still in terms of shortcomings.

Do you agree that many companies are chosen to help humans? There are pros and cons, if all use AI, it is feared that humans do not need much more human help in business, education, economy and life.

Metaverse, this reality makes visuals really real. Because many things that occur to think of imagination, releasing the limits of reality that exists in the world. The reason, before this developed. Signs have emerged in the world of gamers, medical specialists, for models. Visuals are developed through the game from game designs, animation, to the edit process. Usually people who make visuals seem to be realistic are called AR, VR, and ER.

The internet is developed fresh like Web 3, by introducing blockchain and cryptocurrency technology. Can save metadata with extraordinary capacity. Usually the access are software agents. So this website can find our needs quickly. Even this system can draw conclusions from many sources. So if you need a personal assistant in handling many projects, maybe you are interested in trying it.

Instagram

Real life with virtuals with an appeal. AR and VR are felt to be benefits to be included in the fields of education, technology, training, entertainment, etc. For example when I can't find a coach for sharpening skills. AR can train us to get a lot of knowledge. But in fact, the sale of AR and VR is in the field. This opens opportunities for the originators of ideas using this device.

If you have heard that Quantum Computing can manage Bankin and Finace, to manage credit, up to frequency trading and can track fraud. Many brands that produce speeds for users such as Honeywell, Microsoft, AWS, Google, Splunk. They make computing innovations.

Increasingly sophisticated, 3D is now also shifting for printing that uses the prototypes formula. More benefited from the biomedical to the industrial sector. Can be seen the object real. Many if you see health products/ healthcare try this with print their products. Just use a combination of AI, 3D printer, modeling.

Actually the same as AI, Robotic Process Automation is like a software whose customers are mostly for business. You can take care of your product with automatic data, such as your

business email can automatically reply to customers. This tries to complete the tasks from the business world.

For those of you who work as professional it. This RPA can be used as a career place. Like the work of the Business Analyst, Manager, Consultant, Project Manager. Come on! If you become a Mastering RPA, you can explore a big job opportunity, such as RPA Developer, Analyst, Architect.

This computing power is very uphill from what we know before, 5G which will later change to 6G. The changes that we have passed from 3G and 4G have enabled us with the internet that will increase bandwidths to access the streaming platform. Until many people switch to 5G who are professional AR and VR, can be in many gaming services such as Nvidia GeForce Now. HD Cameras helps in traffic management and smart retail. We will see the next change through this computing prediction.

This software is like data science predictions about technological change. If you are interested in this, you can open to find work like AR Architect, AI Engineer, Data Scientist, Robotic Research to Designer.

For one technology, you can learn your DNA to check health. It can even provide solutions to how to figure with disease. These results are collected, analyzing, and diagnosis of people who work as genome research analyst, bioinformatics analyst, genetic engineer, software engineer, etc. So maybe this can be the position you want?

With a smart sophistication, this Smart Device works closely with AI Home Robots, Appliances, Wearables, and Work Devices. Entered into the IT industry with high demand. Most people seem to dream of this smart device to help ease in their lives. For job matters to home matters. If you work as an IT Researcher, Data Scientists, IT Manager, Product Managers, etc. You can explore this sophisticated tool to be developed in Digital Space.

We must often hear, the industry market is currently trying to modify with an environmentally friendly tagline. Because some customers have a vision in that direction, making the global market follow the flow of customers.

Until this technology is provided for humans. Are you included in the group that you want Nature Modification? Now there is New Energy Solutions. Where the world becomes green for The Sake of Its Landscapes. Some people who care about the world who are currently not okay. Trying to switch to Electricity/ Battery and houses using Greener Choices using diesel or renewable energy. To reduce carbon footprints and waste. With the existence of this green market can bring up a job for those of you who want to play as a chemical energy, solar plant design energy, Biotechnology Specialist, etc. The level of robot and human relations is getting higher.

But all of these technologies help humans in many conveniences in all fields and even bring up new job opportunities. So prepare to try new things with a new job position? Many technology abandoned, towards more sophisticated technology. That is all, displayed widely to make humans follow the circle that finally uses it. The more ratio, it will change the world market. Where, humans leave many manual systems because the sophistication of technology changes everything to be easier.

Do you want to make new technology? Or is developing technology today towards a revolution? We will look forward to a new arrival in the following years. The wonders of these robotics are certainly also sourced from human expertise in managing and developing novelty.
